EDUCATION

Rutgers University

Bachelor of Arts in Computer Science

Piscataway, NJ

Expected Dec. 2026

- **Relevant Coursework:** Data Structures and Algorithms, Linear Algebra, Computer Architecture, Principles of Information and Data Management, Principles of Programming Languages, Discrete Structures, Calculus II

TECHNICAL SKILLS

Programming Languages: Java, Python, C/C++, SQL, JavaScript, TypeScript, Dart

Frameworks and Tools: Flutter, Firebase, Git, Postman, Linux, Apache Tomcat, VS Code, Visual Studio, Eclipse

Cloud and Databases: Google Cloud Platform, PostgreSQL, NoSQL, Firebase Realtime Database

Languages: English(Native), Spanish(Native)

EXPERIENCE

Undergraduate Research Assistant

Rutgers University

Oct. 2024 – Present

Piscataway, NJ

- Developed a full-stack web application using Flutter, Dart, Firebase, and SQL to display over 21,000 energy assessments for small and mid-sized companies.
- Implemented Firebase Authentication and real-time database functionality to support user authentication, data synchronization, and backend activity tracking.
- Developed an Online Reporting Tool(ORT) and led tenured professors and PhD researchers on meetings with the Department of Energy and obtained a 200,000\$ Grant that funded the department for the calendar year.
- Performed ETL through Excel Sheets that had total volume of 4.3 GB into Cloud SQL tables and increased query speed by 492%

Information Technology Student Worker

Rutgers University

May 2024 – Aug. 2024

Piscataway, NJ

- Deployed 153 Chromecast devices as reconfigured digital signage systems across multiple Rutgers campuses.
- Developed a program to track Zoom meeting details and participants using a NoSQL database for efficient storage and retrieval.
- Configured 23 Rutgers Zoom Room integrations by creating JSON tablet control profiles to automate classroom TV and device activation.
- Provided technical support for classroom technology, troubleshooting hardware and software issues for faculty and staff.

Cybersecurity Analyst Intern

Resilience Inc.

Nov. 2022 – Feb. 2023

Remote

- Conducted 54 web application vulnerability assessments using Burp Suite, Nmap, and Linux.
- Performed penetration testing to identify open ports and security vulnerabilities on company servers.
- Automated phishing awareness campaigns using Python scripts and the Social Engineering Toolkit.
- Onboarded new team members, delegated tasks, and supported project coordination across the cybersecurity team.

PROJECTS

RUSports Database Management System | C, Python

Apr. 2024

- Built a database management system in C to store and manage structured data for teams, athletes, and competitions.
- Implemented custom data structures with metadata fields to classify programming languages, operating systems, and databases.
- Created functions to parse user input, update records, delete fields, and safely free allocated memory.

RU Hungry | Java, Data Structures

Nov. 2023

- Developed a restaurant management simulation that processed inventory, menu items, transactions, and guest seating.
- Implemented hash tables with separate chaining to track ingredient availability and stock management.
- Used linked lists, queues, and arrays to manage menu items, guests, transactions, and seating categories.
